

ELITE RANGE

INTRODUCTION

We proudly maintain that our doors are only manufactured using galvanised steel; beware of security doors fashioned from untreated steels, as simply put, they will inevitably rust no matter the finish.

Discover our Elite range of doors and see for yourself why security doesn't have to mean a compromise on style.

ELITE RANGE

Our Elite range of doors offer an uncompromising level of security, but with a style and finish to really impress.

Uncanny wood effect finishes and pristine black or white options ensure that there is an Elite door for almost every situation.

SPECIFICATION & SECURITY

- 1

HIGH QUALITY FINISH
A heavy duty finish to the steel door and frame. This allows the door to be used in industrial, commercial and domestic situations, giving the same high security, whilst still being aesthetically pleasing.
- 2

DRAUGHT AND WEATHERPROOF SEALS
Pre-fitted to the doorset are all-round draught and weatherproof seals, sealing the door from water and draught, contributing towards high acoustic and thermal values.
- 3

HEAVY DUTY HINGES
3 Stainless steel hinges and 2 Dog bolts (fixed locking points) are on the hinge side of door leaf.
- 4

DDA COMPLIANT THRESHOLD
Disability Discrimination Act specifies a level threshold with a maximum upstand of 15mm with chamfered edges.
- 5

ANTI JEMMY BAR LIPS
2 anti jemmy bar lips are integrated into the door & frame, including on the top and hinge side, for added security.
- 6

LEVER HANDLES
A stylish set of heavy duty stainless steel lever handles finish off the clean look of the doorset. With a highly functional thumb turn internally, a separate single lock can be engaged for rapid security without keys.
- 7

MULTI POINT LOCKING SHOOT BOLT MECHANISM
A shoot bolt into the top of the frame, 10 shoot bolts into the latching side of the frame along with 2 ring hooks. Including the 2 dog bolts and latch, in total 16 points secure the door leaf in the frame.
- 8

FULLY WELDED CONSTRUCTION FOR OPTIMUM STRENGTH
The doorframe is constructed using 2.0mm gauge steel and double skinned 1.0mm gauge steel for the door leaf. The door leaf is fully welded, encasing a honeycomb filler between the 2 skins, adding to it's high impact, thermal and acoustic values.
- 9

HEAVY DUTY EURO PROFILE CYLINDER
Incorporating anti-pick, anti-bump, anti-snap, anti-drill and anti-pull features.
- 10

VERSATILE FRAME CONFIGURATION
The innovative frame design allows for fitting in almost any situation.
